SERVICES WE PROVIDE

Digital printing

Digital printing is a method of printing from a digital-based image directly to a variety of media. It usually refers to professional printing where small-run jobs from desktop publishing and other digital sources are printed using large-format & or high-volume laser or inkjet printers. Digital printing has a higher cost per page than more traditional offset printing methods, but this price is usually offset by avoiding the cost of all the technical steps required to make printing plates.

Artwork

The average person will become strongly connected to artwork they can feel using their imagination. Describe the mood of your artwork as well as the visual characteristics. As you know, the visual characteristics of artwork are lines, colors, values, shapes, textures, space, and movement.

3D & Maping

3D mapping means profiling of objects in three dimensions to map the objects in real-world. There are several ways for a 3D profiling of an area or object, such as using a pair of a stereo camera. Another method is to measure the depth of an object or feature from focus.

Sublimation

Sublimation Printing is a computer printing technique which uses heat to transfer dye onto materials such as a plastic, card, paper, or fabric. The sublimation name was first applied because the dye was considered to make the transition between the solid & gas states without going through a liquid stage.

Silk Screen Printing

Screen printing is a printing technique where a mesh is used to transfer ink onto a substrate, except in areas made impermeable to the ink by a blocking stencil. A blade or squeegee is moved across the screen to fill the open mesh apertures with ink, and a reverse stroke then causes the screen to touch the substrate momentarily along a line of contact.

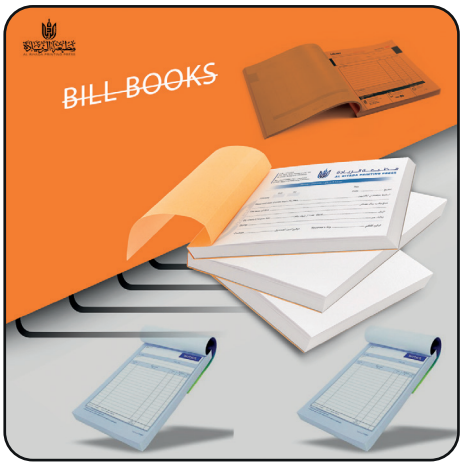
It usually refers to professional printing where small-run jobs from desktop publishing and other digital sources are printed using large-format & or high-volume laser or inkjet printers. Digital printing has a higher cost per page than more traditional offset printing methods.



Sublimation

Sublimation Printing is a computer printing technique which uses heat to transfer dye onto materials such as a plastic, card, paper, or fabric. The sublimation name was first applied because the dye was considered to make the transition between the solid & gas states without going through a liquid stage.

Screen Printing

Screen printing is a printing technique where a mesh is used to transfer ink onto a substrate, except in areas made impermeable to the ink by a blocking stencil. A blade or squeegee is moved across the screen to fill the open mesh apertures with ink, and a reverse stroke then causes the screen to touch the substrate momentarily along a line of contact.

Roll up's Printing

Roll Up is a process used by investors (commonly private equity firms) where multiple small companies in the same market are acquired and merged.

An investor faced with an opportunity to invest in two competing companies may reduce risk by simply investing in both & merging them.
